

TO: ALL MEMBERS

The Board of Directors asked that a program be put together utilizing an engineer to develop SPCC Plans for farm, contractor and other bulk customers who are looking to comply with the new EPA requirements for aboveground tanks. The EPA has recently passed new SPCC Plan rules that allow owners of aboveground tanks of less than 10,000 gallons to prepare a Self-Certified Plan.

Marty Bonnell with Brams Engineering is a civil engineer who has had several years experience and has written over 250 SPCC plans for bulk plants. Mr. Bonnell will work directly with your bulk customers to develop a Self-Certified SPCC Plan for their facilities at a cost of \$300, billed to the tank owner.

Please pass the enclosed information on to your customers who are looking for a way to comply with the new SPCC requirements.
